Riya Singh

Technical Skills

Azure Data Factory (ADF)
Expert
ETL, Pipelines, Triggers

Snowflake
Expert
SQL, Star Schema, SCD

SQL
Expert
Query Optimization, Stored Procedures

Microsoft Azure
Expert
ADLS, Logic Apps, Functions, Key Vault

dbt (Data Build Tool)
Advanced
Transformation, Azure DevOps

Power BI
Advanced
Dashboards, DAX, Reporting

Python
Advanced
PySpark, Data Processing

Azure Synapse Analytics
Advanced
Serverless SQL, Dedicated Pool

Spark / Databricks
Intermediate
PySpark, Big Data

Hadoop / Hive / Talend
Intermediate
Big Data, On-Prem Migration

Certifications

Azure Administrator Associate (AZ-104)
Microsoft

Administering Microsoft Azure SQL Solutions (DP-300)
Microsoft

Microsoft Power BI Data Analyst (PL-300)

Professional Summary

Tech professional with **5+ years of experience** designing, developing, and maintaining scalable data pipelines and architecture. Adept at SQL, Python, and cloud platforms to optimize data workflows and ensure data integrity. Specializes in Azure Data Factory, Snowflake, dbt, and end-to-end ETL pipeline development supporting business-critical reporting and analytics.

Experience

Amdocs Mar 2024 – Present
Senior Data Engineer

- Built pipelines to generate monthly commissions for a UK telecom company's indirect partners using Azure ADF, Azure Logic Apps, Snowflake, and dbt.
- Architected a near real-time **fraud detection solution** using Azure Logic Apps and Azure Functions, ensuring instant ingestion and processing of incoming data streams.
- Designed Snowflake databases with data warehousing principles (fact/dimension tables, star schema, SCD handling) for analytics and reporting.
- Built ETL workflows in ADF — extracting from ADLS, loading into Snowflake, and transforming with dbt.
- Integrated external RESTful APIs into ADF pipelines for ingestion and validation of partner data.
- Created complex SQL queries, views, and stored procedures in Snowflake for analysis and reporting.
- Leveraged Azure DevOps for dbt deployment, including PR management and code review processes.
- Monitored data integrity and performance using Splunk, BMC, and cloud-native tools.
- Collaborated with cross-functional teams and presented technical solutions to senior business stakeholders.

Accenture Feb 2021 – Mar 2024
Azure Data Engineer / Azure Admin

- Created ETL workflows to load historical and incremental data into Azure Data Warehouse and Azure Data Lake using ADF, with triggers for pipeline automation.
- Developed and optimized ADW SQL queries; built databases per business requirements.
- Built Power BI reports published on regular intervals to local managers and business stakeholders.
- Participated in Agile Scrum ceremonies: daily standups, sprint planning, and retrospectives.
- Collaborated with project managers on estimates, timelines, and resource plans.
- **Azure Admin:** Managed ADLS, provisioned Dedicated and Serverless SQL pools, implemented Column Level Security, Dynamic Data Masking, and Always Encryption. Handled Key Vault and secrets rotation.

Key Projects

Three UK – Commission Generation Platform (Amdocs) Mar 2024 – Present
End-to-end commission payment system for a UK telecom company. Data flows through ADF, dbt, and Snowflake for cleaning and transformation. Final output transferred to SAP Callidus via ADF, which generates partner commissions and dispatches AP files to the bank.

Fraud Detection Solution (Amdocs) 2024
End-to-end fraud detection pipeline using ADF, Azure Functions, SQL, and ADLS. Developed pipelines to decode Base64 images and integrated fraud verification data from multiple sources into a unified dataset for reporting.

Kubota – On-Prem to Cloud Migration (Accenture) Feb 2021 – Mar 2024
Migrated Japanese transport on-premises data to Azure using Hadoop, Hive, Spark, Talend. Three-layer architecture: Ingestion (Hive cleansing) → Distillation (Talend → ADLS) → Consumption (ADF → Azure Synapse + SQL). Built complex merge tables and metrics using PySpark in Databricks.
